

## Preparing for: MR enterography

### 1. THE TEST

#### Test date

You are scheduled for your appointment on \_\_\_\_\_ at \_\_\_\_\_.

To provide thorough and appropriate care, we must devote the necessary amount of time to each individual patient, and the time this will take cannot be determined beforehand. If for any reason you are unable to make your appointment, please notify us as far in advance as possible.

#### What does the test consist of?

A magnetic resonance (MR) enterography is a diagnostic imaging technique that enables your doctor to view the walls of your intestine. It is a noninvasive procedure that does not use X-rays or radioactive elements. MR enterography uses magnetic fields to obtain high-resolution images. It is sometimes necessary to administer a contrast agent called **gadolinium**. The test takes about 40–60 minutes.

#### FOR YOUR SAFETY

You must inform us before the test if any of the following applies:

- ✓ You have developed any type of allergic or adverse reaction to a contrast agent before;
- ✓ You are pregnant or suspect you may be.

For this test to be effective, it is essential that you follow the preparation instructions that appear below.

### 2. BEFORE THE TEST

#### 2.1. How to prepare for the test

- It is recommended to avoid heavy meals on the day of the test.
- You must **fast** prior to your test, avoiding solid food for at least **4 hours** before the examination.
- If your doctor has prescribed that the test be performed with **sedation**, please indicate this at the time of the appointment and follow these instructions: refrain from eating solid foods for at least 6 hours and do not drink any liquids for 2 hours prior to the test (Infants should fast for at least 4 hours if they are receiving breast milk and at least 6 hours if they consume artificial milk. Infants can be given a small volume of water up to 2 hours before the test). You should be accompanied by an adult and refrain from driving and drinking alcohol for 12 hours after the test.
- Do not take metal objects into the MRI examination room, as doing so may cause the objects to become damaged or affect image quality, and some may even be dangerous. These objects include watches, glasses, contact lenses, hearing aids, magnetic stripe cards, piercings, and any other metallic object. You should also avoid wearing makeup, eye shadow, mascara, and nail polish.
- Please report to the diagnostic imaging department **one hour before** your appointment time, as you will need to drink a liter of water containing a special substance.
- Wear clothes that are **easy to remove and put back on**.

## 2.2. Precautions

It is very important that you notify us before your test if:

- You have developed any type of **allergic or adverse reaction** to contrast dye before;
- You are **diabetic** or have **liver or kidney failure**;
- You are **pregnant or suspect you may be**;
- **Women who are breastfeeding:** if your scan requires contrast dye, you can continue breastfeeding normally after the procedure (Note, however, that a very small amount of dye may be passed on to the child through breast milk. You may choose to avoid breastfeeding for the 12 hours following the test, opting to remove milk beforehand and administer the milk to your baby over the 12 hours after the test.);
- You have a **pacemaker, prosthetic implant** (e.g., joint replacement, dental prosthesis), **metallic device** (e.g., screws, pins, plates), **recently inserted surgical staples, breast tissue expander**, etc.;
- If you have an **implantable cardioverter-defibrillator (ICD), electrodes for the heart or brain, clip for a brain aneurysm, an implanted electronic device** (e.g., brain stimulation device, drug-infusion port, ear implant) or a **stent, you must furnish a medical report that contains the model you wear**;
- You have a **tattoo** (Tattoo ink may have metallic components, possibly causing you to experience itchiness, tingling, pain, burns, or a burning sensation during the test. Although people with tattoos can have an MRI, the tattoos should be properly protected to avoid these problems.);
- You are **claustrophobic** (There may be difficulties if you have claustrophobia, or fear of enclosed spaces. If you think you may become anxious inside the MRI unit, you should inform the technicians of this before the test.).

If you require any further explanation or clarification, do not hesitate to ask the staff in the department where you will be having your test.

## 3. REMARKS

### Other documents

The safety questionnaire must be completed and signed before the test can be performed.

### Accessing your medical records

Once your test results have been analyzed by your doctor, you may access them on the **Patient Portal**. The Patient Portal is a private online space where you can manage all aspects of your health and that of your family—wait-free and with no unnecessary trips to the hospital. Manage your appointments and access your reports, test results, and imaging studies by going to

<https://www.quironsalud.es/es/portal-paciente>
