

Preparing for: Prostate MRI

1. THE TEST

Test date

You are scheduled for your appointment on _____ at _____.

Appointment times are subject to change. To provide thorough and appropriate care, we must devote the necessary amount of time to each individual patient, and the time this will take cannot be determined beforehand. If for any reason you are unable to make your appointment, please notify us as far in advance as possible.

What does the test consist of?

A prostate magnetic resonance imaging exam (prostate MRI) is a diagnostic imaging technique used to detect and assess diseases of the prostate. It is a noninvasive procedure that does not use X-rays or radioactive elements.

It is sometimes necessary for a patient to receive intravenous **contrast dye** to obtain a clearer picture of the area of interest. The most commonly used contrast agent is gadolinium.

Patients having an MRI scan are placed inside a machine, where they are subjected to a magnetic field. MRI scanners are very sensitive to movement, so it is important that the patient remain still for the duration of the exam. The exam takes 30 to 45 minutes to complete.

FOR YOUR SAFETY

You must inform us before the test if any of the following applies:

- ✓ You have developed any type of allergic or adverse reaction to a contrast agent before.

For the test to be effective, it is essential that you follow the preparation instructions that appear below.

2. BEFORE THE TEST

2.1. How to prepare

The day of your test:

- Do not eat solid foods for **4 hours** before your examination.
- If your doctor has prescribed that the test be performed with **sedation**, please indicate this at the time of the appointment and follow these instructions: refrain from eating solid foods for at least 6 hours and do not drink any liquids for 2 hours prior to the test. You should be **accompanied by an adult** and refrain from driving and drinking alcohol for 12 hours after the test.
- Wear clothes that are **easy to remove and put back on**.

Continued on the next page→

- Come to the MRI examination room **without metal objects** of any kind, as doing so may cause the objects to become damaged or affect image quality, and some may even be dangerous. These objects include jewelry, hearing aids, magnetic stripe cards, piercings, and any other metallic object. You should also avoid wearing glasses, contact lenses, makeup, eye shadow, mascara, and nail polish.

2.2. Precautions

It is very important that you notify us before your test if:

- You have developed any type of **allergic or adverse reaction** to contrast dye before;
- You have **hemorrhoids**, an **anal fistula**, or other abnormalities of the rectum or anus;
- You are **diabetic** or have **liver or kidney failure**;
- You have a **pacemaker**, **prosthetic implant** (e.g., joint replacement, dental prosthesis), **metallic device** (e.g., screws, pins, plates), **recently inserted surgical staples**, etc.;
- If you have an implantable cardioverter-defibrillator (ICD), electrodes for the heart or brain, clip for a brain aneurysm, an **implanted electronic device** (e.g., brain stimulation device, drug-infusion port, ear implant) or a stent, you must furnish a medical report specifying the model you wear;
- You have a **tattoo** (Tattoo ink may have metallic components, possibly causing you to experience itchiness, tingling, pain, burns, or a burning sensation during the test. All tattoos should be protected to keep this from happening.);
- You are **claustrophobic**. There may be difficulties if you have claustrophobia, or fear of enclosed spaces. (If you think you may become anxious inside the MRI unit, you should inform the technicians of this before the test.)

If you require any further explanation or clarification, do not hesitate to ask the staff working in the department where you will be having your test

3. REMARKS

Other documents

The safety questionnaire must be completed and signed before the test can be performed.

Accessing your medical records

Once your test results have been analyzed by your doctor, you may access them on the **Patient Portal**. The Patient Portal is a private online space where you can manage all aspects of your health and that of your family—wait-free and with no unnecessary trips to the hospital. Manage your appointments and access your reports, test results, and imaging studies by going to
